

PRELIMINARY

## Intel486™ SX MICROPROCESSOR

SmartDie™ Product Specification

- **SL Technology for Energy Efficiency**
  - Intel's System Management Mode
  - Stop Clock, Auto HALT and Auto Idle Power Down
- **Binary-Compatible with Large Software Base**
  - MS-DOS\*, OS/2\*, Windows\*
  - UNIX\* System V/386
  - iRMX Software, iRMK Kernels
- **High Integration Enables On-Chip**
  - 8 Kbyte Code and Data Cache
  - Paged, Virtual Memory Management
- **Easy to Use**
  - Built-In Self Test
  - Hardware Debugging Support
  - Intel Software Support
  - Extensive Third Party Software Support
- **High-Performance Design**
  - Intel486 One Clock Instruction Core
  - 80/100 Mbyte/sec Burst Bus at 25/33 MHz
  - CHMOS V Process Technology
  - Dynamic Bus Sizing for 8-Bit, 16-Bit and 32-Bit Buses
- **Complete 32-Bit Architecture**
  - Address and Data Buses
  - Registers
  - 8-Bit, 16-Bit and 32-Bit Data Types
- **Multiprocessor Support**
  - Multiprocessor Instructions
  - Cache Consistency Protocols
  - Support for Second-Level Cache
- **IEEE 1149.1 Boundary Scan Compatibility**
- **Intel SmartDie Product**
  - Full AC/DC Testing at Die Level
  - 0°C to +80°C (Junction) Temperature Range
  - 25 MHz and 33 MHz Speeds @ 3.3V

NOTICE: This document contains preliminary information on new products in production. It is valid for the devices indicated in the revision history. This specification is subject to change without notice. Verify with your local Intel Sales Office that you have the latest SmartDie product specification before finalizing a design.

REFERENCE INFORMATION: The information in this document is provided as a supplement to the Standard Package Data Sheet on a specific product. Please reference the Standard Package Data Sheet/Book (Order No. 242202) for additional product information and specifications not found in this document.

\*Other brands and names are the property of their respective owners. Information in this document is provided in connection with Intel products. Intel assumes no liability whatsoever, including infringement of any patent or copyright, for sale and use of Intel products except as provided in Intel's Terms and Conditions of Sale for such products. Intel retains the right to make changes to these specifications at any time, without notice. Microcomputer Products may have minor variations to this specification known as errata.

**NOTES:**

1. N.C. signifies no connect. These pads must not be connected.
2. The symbol “#” is used at the end of the signal name to denote an active low signal.
3. X-Y pad coordinates represent bond pad centers and are relative to center of die.
4. Double bond pad opening.

## 2.0 INTEL DIE PRODUCTS PROCESSING

### TEST PROCEDURE

Intel has instituted full-speed functional testing at the die level for all SmartDie™ products. This level of testing is ordinarily performed only after assembly into a package. Each die is tested to the same electrical limits as the equivalent packaged unit.

### WAFER PROBE

Wafer probing is performed on every wafer produced in an Intel Fab. The process consists of specific electrical tests as well as device-specific functionality tests.

At the wafer level, built-in test structures are probed to verify that device electrical characteristics are in control and meet specifications.

Measurements are made of transistor threshold voltages and current characteristics; poly and contact resistance; gate oxide and junction integrity; and specific parameters critical to the particular technology and device type. Wafer-to-wafer, across-the-wafer run-to-run variation and conformance to spec limits are checked.

The actual devices on each wafer are then sorted for both functionality and performance to specifications. Additional reliability tests are also included in the probe steps.

### WAFER SAW

Probed wafers are transferred to Intel's assembly sites to be sawed. The saw cuts completely through the wafer.

## DIE INSPECTION

Upon completion of the wafer saw, the die are moved to pick and place equipment that removes reject die. The remaining die are submitted to the same visual inspection as standard packaged product. The compliant die are then transferred to GEL-PAK\*s for shipment.

\*GEL-PAK™ is a trademark of Vichem Corporation.

## PACKING PROCEDURE

Intel will ship all Intel die products in GEL-PAKs. GEL-PAKs eliminate the die edge damage usually associated with die cavity plates or chip trays.

The backside of each die adheres to the gel membrane in the GEL-PAK, eliminating the risk of damage to the active die surface. A simple vacuum release mechanism allows for pick and place removal at the customer's site.

Only die from the same wafer lot are packaged together in a GEL-PAK, and all die are placed in the GEL-PAKs with a consistent orientation. The GEL-PAKs are then sealed and labeled with the following information:

- Intel SmartDie
- Device Type
- Spec
- Customer Part Number (if applicable)
- Fab
- Quantity
- APO
- Date
- ROM Code (if applicable)

### NOTE:

GEL-PAKs require a Vacuum Release Station. For additional information about GEL-PAK's, contact Vichem Corporation.

## INSPECTION STEPS

Multiple inspection steps are performed during the die fabrication and packing flow. These steps are performed according to the same specifications and criteria established for Intel's standard packaged product. Specific inspection steps include a wafer saw visual as well as a final die visual just before die are sealed in moisture barrier bags.

## STORAGE REQUIREMENTS

Intel die products will be shipped in GEL-PAKs and sealed in a moisture-barrier anti-static bag with a desiccant. No special storage procedures are required while the bag is still unopened. Once opened, the GEL-PAK should be stored in a dry, inert atmosphere to prevent corrosion of the bond pads.

## ESD

Components are ESD sensitive.

## 3.0 SPECIFICATIONS

Specifications within this document are specific to a particular die revision and are subject to change without notice. Verify with your local Intel Sales Office that you have the latest data before finalizing a design.

### 3.1 Intel486™ SX Microprocessor Physical Specifications

Substrate Bias Condition:  $V_{SS}$

Post-Saw Die Dimensions:

Mils:  $X = 261 \pm 0.5$ ,  $Y = 396 \pm 0.5$

See associated Die/Bond Pad Layout for X,Y orientation.

Die Backside Metalization: (from substrate)  
 200 Å Chrome  $\pm 100$  Å  
 1500 Å Gold  $\pm 500$  Å

Pad Passivation Opening Size:

Mils: 4.6 x 4.6 (single pads),  
 6.1 x 4.6 (double-wide pads)

Microns: 117.5 x 117.5 (single pads),  
 153.9 x 117.5 (double-wide pads)

Die Thickness: 17 ( $\pm 1$  mil) mils

Minimum Pad Pitch:

Pads may not be evenly pitched. Minimum pitch is 142.5 microns (5.6 mils).

Bond Pad Metalization (outer most layer first)

1.0 micron Al—0.5% Copper, 0.1 micron Titanium

Die Revision: aC-0

Pads per Die: 214

Intel Fabrication Process: CHMOS V (min. feature size 0.8 microns)

Passivation: (outer most layer first)

5.0  $\pm 0.7$  microns Polyimide.  
 0.6  $\pm 0.1$  microns Silicon Nitride

### 3.2 DC Specifications

#### ABSOLUTE MAXIMUM RATINGS\*

GEL-PAK Storage Temperature . . . . .0°C to +70°C  
 Junction Temperature  
 Under Bias . . . . . -65°C to +110°C  
 Supply Voltage with  
 Respect to V<sub>SS</sub> . . . . . -0.5V to +6.5V  
 Voltage on Other Pads . . . . . -0.5 V to V<sub>CC</sub> + 0.5V

#### OPERATING CONDITIONS\*

V<sub>CC</sub> (Digital Supply Voltage) . . . . .3.3V ±0.3V  
 T<sub>J</sub> (Junction Temperature  
 Under Bias) . . . . .0°C to +80°C  
 Operating Frequency . . . . .25/33 MHz

NOTICE: This data sheet contains preliminary information on new products in production. The specifications are subject to change without notice. Verify with your local Intel Sales office that you have the latest data sheet before finalizing a design.

*\*WARNING: Stressing the device beyond the "Absolute Maximum Ratings" may cause permanent damage. These are stress ratings only. Operation beyond the "Operating Conditions" is not recommended and extended exposure beyond the "Operating Conditions" may affect device reliability.*
