INCREASE STORAGE DRAMATICALLY: IBM's first optical storage device, the IBM 3363 Optical Disk Drive, is designed specifically for the IBM Personal System/2 (TM). This new removable disk storage device dramatically increases the amount of data IBM Personal System/2 users can save and retrieve. One optical disk cartridge can hold 200 megabytes of data. This is more than 500 times the capacity of a 5.25-inch 360 kilobyte diskette -- or a stack of letters 33 feet high. And certain models can support up to eight drives, increasing storage to 1.6 billion bytes.
